PREFACE

The curriculum, with varying definitions, is said to be a roadmap or plan of teaching-learning process that students of an academic program are required to undergo. It includes objectives and learning outcomes, course contents, scheme of studies, teaching approaches, and assessment methodologies. Since knowledge in all fields and sectors is expanding at a faster pace and new disciplines are also emerging; it is imperative that curricula should be dynamic having regular review and updation.

The University Grants Commission (UGC) was designated as the competent authority to develop, review, and revise curricula beyond Class-XII vide Section 3, Sub-Section 2 (ii), Act of Parliament No. X of 1976 titled “Supervision of Curricula and Textbooks and Maintenance of Standard of Education”. With the repeal of UGC Act, the same function was assigned to the Higher Education Commission (HEC) under its Ordinance of 2002, Section 10, Sub-Section 1 (v). In compliance with the above provisions, the HEC had been undertaking the development of curricula for new/emerging fields and revision of curricula after regular intervals through respective National Curriculum Revision Committees (NCRCs) until 2018.

As a policy change and expanding higher education base under HEC, the curriculum review and development task has been shifted to the respective regulators and HEIs. PEC also having mandate under its Act of Parliament and especially after attaining Washington Accord full signatory status and IPEA licensing authority, took up the challenge to review and develop the curricula for engineering programs based on Outcome-Based Education (OBE) System. PEC has therefore constituted an Engineering Curriculum Review and Development Committee (ECRDC) and also subject ECRDCs comprising of eminent engineers and professionals from academia and industry to take up the task of curricula review and updation. Nevertheless, the basic templates developed by HEC NCRCs have been followed as guidelines.

Under OBE based curriculum review and development framework, PEC held national and regional level stakeholders and industrial consultation workshops engaging HEIs, industry, technical and consulting organizations. The experts’ feedback and suggestions were translated into the curriculum review process taking into consideration the dynamics of technological advancement, industrial needs and management-cum-soft skills for engineering graduates.
This curriculum document would serve as a guideline whereas allowing HEIs to tame/ change within the framework by introducing courses in support of local/ required industrial demand as well as satisfying 12 GAs (Graduate Attributes) covering core and elective courses, considered as hallmark of OBE system in the international environment. At the same time, this curriculum framework would fulfill our national, social and economic needs leading towards attainment of Sustainable Development Goals (SDGs-2030). It would also provide the level of competency specified in Pakistan Qualification Framework to make it compatible with international educational standards.
1. Engineering Curriculum Review & Development Committee (ECRDC)

PEC in its efforts towards quality engineering education, took up the challenge of curriculum review and development for engineering programs after due consent of HEC. A high level Engineering Curriculum Review and Development Committee (ECRDC), led by Prof Engr Dr Fazal Ahmad Khalid, Chairman Punjab HEC/ Vice Chairman PEC, was constituted whereas other eminent members are from industry and academia to take up the task of curricula review and updation, besides developing curriculum for new/ emerging fields. The main responsibility of ECRDC is to oversee the entire curriculum review and development process while setting policies and guidelines for the subject ECRDCs working in their respective domains. The 1st meeting of main ECRDC was held on 29th June, 2018 at PEC HQ, Islamabad, wherein the Convener briefed the scope, objective and ToRs of the Committee and also formulated the subject ECRDCs comprising of eminent engineers and professionals from academia and industry.

1. Engr Prof Dr Fazal Ahmed Khalid  
Convener, Metallurgy, Materials, Mining Engg & Allied Disciplines

2. Engr Prof Dr Iftikhar Hussain  
Convener Mechanical Engg & Allied Disciplines

3. Engr Prof Dr M. Younus Javed  
Convener Electrical Engg & Allied Disciplines

4. Engr Malik Saleem Ullah Saeed  
Convener Chemical Engg & Allied Disciplines

5. Engr Dr Wasim Khaliq  
Convener, Civil Engg & Allied Discipline

6. Engr Dr Muhammad Ashraf  
Convener, Agricultural Engg & Allied Disciplines
Curriculum of Aerospace Engineering

7. Engr Prof Dr Jameel Ahmed
   Convener, Common to All (Non-Engg Component)

8. Engr Muhammad Raza Chohan
   Director General, HEC

9. Engr Dr Nasir Mahmood Khan
   Additional Registrar (Accreditation), PEC

10. Engr Dr Ashfaq Ahmed Sheikh, Additional Registrar, CPD
    Secretary

2. ECRDC Agenda

   - The ECRDC is responsible to oversee the overall working of curriculum
     review and development for all engineering programs in terms of strategy,
     guidance and progress and thereby submission to the relevant forum for
     adoption/ notification.
   - Each Member of ECRDC will also work in the capacity of Convener for
     respective disciplines as mentioned against their names and as per their
     ToRs.
3. OBE Based Curriculum Development Framework

Outcome Based Education (OBE) is an approach of teaching and learning that focuses on what students should be able to attain at the end of the educational program. OBE is a student-centered system which concerns what the students will know and be able to do as learning outcomes. The curriculum development under OBE is therefore an integration of graduates attributes and stakeholders’ feedback in cognizance with the institution's Vision and Mission.

**Outcome-Based Education (OBE) - Curriculum Development Framework**
4. PDCA Approach to Curriculum Design and Development

The process of curriculum design and development constitutes various interconnected elements with the objective of achieving the intended purpose of the program. The Plan-Do-Check-Act approach (PDCA) as explained below has been followed in the curriculum development and review process.

Plan. This stage begins with an analysis of the stakeholders' needs of faculty, current and past students, employers and society in general. The stakeholders' needs are translated into human resource terminology i.e. graduate competencies which in turn translated into educational taxonomy and learning outcomes. Based on the learning outcomes, curriculum is designed backward to meet PLOs.
Do. The plan stage is implemented where curriculum is delivered and learning outcomes are assessed to gauge the achievement of PLOs.

Check. This stage involves the analysis of assessment results and feedback from students and faculty. Areas for improvement are identified.

Act. When the learning outcomes are achieved, the curriculum, learning and teaching strategies and assessment methods are standardized. Best practices are shared and improvement is made for the next cycle of PDCA.

5. ECRDC for Mechanical & Allied Engineering Disciplines

The PEC Engineering Curriculum Review and Development Committee (ECRDC) of Mechanical and Allied Engineering Disciplines took up the task to review and update the curriculum for the BE Aerospace Engineering degree program. The subject Committee held meetings on 28-8-2019 and 22-1-2020 at PEC Headquarters Islamabad besides Sub-Group Aerospace Engg meeting on 7-10-2019. The Committee consisted of following members:

1. Engr Prof Dr Iftikhar Hussain
   Vice Chancellor
   University of Engineering & Technology
   Peshawar
   Convener

2. Engr Prof Dr Muhammad Tufail
   Pro Vice Chancellor
   NED UET, Karachi
   Member

3. Engr Prof Dr Syed Mushtaq Shah
   Dean Faculty of Engg.
   Baluchistan University of Engineering & Technology
   Khuzdar, Balochistan
   Member

4. Engr. Prof Dr Shahab Khushnood
   Professor (Rtd)
   Faculty of Mechanical & Aeronautical Engineering
   UET, Taxila
   Member
5. Engr Prof Dr Javaid Iqbal  
   Dean College of EME  
   Peshawar Road  
   Rawalpindi  
   Member

6. Engr Meer Abdul Qayyum Babar  
   Chief Engineer (Rtd)  
   WAPDA, Jhelum  
   Member

7. Engr Prof Dr Mohammad Pervez Mughal  
   Chairman  
   Department of Industrial & Manufacturing Engineering  
   University of Engineering & Technology  
   Lahore  
   Member

8. Engr Muhammad Shaukat  
   Deputy Manager  
   Mari Petroleum  
   Islamabad  
   Member

9. Engr Prof Dr Rizwan Mehmood Gul  
   Professor, Faculty of Mechanical Engineering  
   University of Engineering & Technology  
   Peshawar  
   Member

10. Engr Dr Alam Zeb  
    General Manager  
    Project Management Organization (PMO)  
    Rawalpindi  
    Member

11. Engr Dr Abdul Rahim Abbasi  
    Principal Engineer  
    Karachi Nuclear Power Plant (KANUPP)  
    Karachi  
    Member

12. Engr Dr Manzar  
    Air Commodore  
    Pakistan Aeronautical Complex  
    Kamra, Distt. Attock  
    Member
13. Engr Prof Dr Iqbal Hussain
   Professor
   University of Engineering & Technology,
   Lahore

14. Engr. Dr Hamid Zaigham
   Professor
   Faculty of Materials Science and Engineering
   Ghulam Ishaq Khan Institute of
   Engineering Sciences and Technology
   Swabi

15. Engr. Dr. Khalid Rahman
   Associate Professor
   Faculty of Mechanical Engineering
   Ghulam Ishaq Khan Institute of
   Engineering Sciences and Technology
   Swabi

16. Engr Prof Dr M. A. Irfan Mufti
   Dean Faculty of Mechanical, Chemical,
   Industrial, Mechatronics & Energy Engineering
   University of Engineering & Technology
   Peshawar

17. Engr Prof Dr Salim ur Rehman
   Vice Chancellor
   Sarhad University of Science & Information
   Technology, Peshawar

18. Engr Dr Ajaz Bashir Janjua
   Dy. General Manager
   Heavy Mechanical Complex (HMC)
   Taxila, Distt. Rawalpindi

19. Engr Prof Dr Muhammad Naeem
   Professor
   Institute of Space Technology
   Islamabad
Curriculum of Aerospace Engineering

20. Mr. Hidayatullah Kasi  
Deputy Director  
Higher Education Commission, Islamabad

21. Engr Dr Ashfaq Ahmed Sheikh  
Additional Registrar-CPD  
Pakistan Engineering Council, Islamabad

22. Engr Muhammad Kashif Ali  
Assistant Registrar-CPD  
Pakistan Engineering Council, Islamabad

5.1 Sub Group Aerospace Engineering

1. Engr Prof Dr Salim ur Rehman  
Vice Chancellor  
Sarhad University of Science & Information Technology, Peshawar

2. Engr Prof Dr Muhammad Naeem  
Professor  
Institute of Space Technology  
Islamabad

3. Engr Meer Abdul Qayyum Babar  
Chief Engineer (Rtd)  
WAPDA, Jhelum

4. Engr Dr Manzar  
Air Commodore  
Pakistan Aeronautical Complex  
Kamra, Distt. Attock

5. Engr Prof Dr Babar Saeed  
Professor  
Air University, Islamabad
6. Engr Prof Dr Abdul Munem Khan  
   Professor  
   Institute of Space Technology  
   Islamabad  
   Expert

7. Engr Prof Dr Iqbal Rasool  
   Professor  
   Institute of Space Technology  
   Islamabad  
   Expert

8. Engr Prof Dr Ibrahim Haneef  
   Professor  
   Department of Mech and Aerospace Engineering  
   Air University, Islamabad  
   Expert

9. Engr Prof Dr Messam Abbas Naqvi  
   AVRID  
   Pakistan Aeronautical Complex,  
   Kamra  
   Expert

10. Mr. Hidayatullah Kasi  
    Deputy Director  
    Higher Education Commission  
    Islamabad  
    Rep HEC

11. Engr Dr Ashfaq Ahmad Sheikh  
    Additional Registrar-CPD  
    Pakistan Engineering Council, Islamabad  
    Secretary

12. Engr Muhammad Kashif Ali  
    Assistant Registrar-CPD  
    Pakistan Engineering Council, Islamabad  
    AR-CPD
6. Agenda of ECRDC for Mechanical and Allied Engineering Disciplines

- The Subject ECRDC will work under the overall directions and supervision of main ECRDC comprising all Conveners.
- The key driving lines for the development of engineering curriculum for each discipline will be the overall policy of Pakistan Engineering Council in connection with international commitments (Washington Accord, IPEA etc.) and Government policies / HEC.
- Review of polices and stakeholders’ feedback for the sector(s) relevant to the respective discipline.
- Comparative study of the curricula being offered at various engineering universities/institutions following the OBE-based system.
- Development and finalization of complete scheme and curriculum for respective discipline including all aspects.

Engr Prof Dr. Iftikhar Hussain, the Convener highlighted the important benchmarks and international best practices to be considered for the revision of the curriculum while taking into account the Outcome Based Education (OBE) system. He also suggested that the Committee comprising professors and experts from academia, industry and R&D institutions has provided useful inputs and suggestions covering new developments to be incorporated in the curriculum. He also highlighted the importance of the field of Aerospace Engineering for a leadership role in the defence related industry, space technology program, and the commercial airlines while addressing socio-economic issues and challenges envisaged in SDGs-2030 as under and well-mapped within curriculum;

- Goal-1: No Poverty
- Goal-2: Zero Hunger
- Goal-3: Good Health and Well-being
- Goal-4: Quality Education
- Goal-5: Gender Equality
- Goal-8: Decent Work and Economic Growth
- Goal-9: Industrial Innovation and Infrastructure
- Goal-12: Responsible Consumption and Production
The curriculum therefore has been designed based on above SDGs translating into program objectives and mapped with the scheme of study.
7. **Program Educational Objectives (PEOs) and Learning Outcomes (PLOs)**

As guidance, the sample Program Educational Objectives (PEOs) and Program Learning Outcomes (PLOs) are given below for a typical Aerospace Engineering Program. The HEIs should have their own program objectives, PLOs and CLOs in line with the institution’s Vision and Mission, in cognizance with industrial needs as well as national and international trends.

7.1 **Program Educational Objectives (PEOs)**

The program aims at imparting quality education to Aerospace Engineering graduates for contributing to the society through modern technologies and practices in line with SDGs especially Goal-1, Goal-2, Goal-3, Goal-4, Goal-5, Goal-8, Goal-9 and Goal-12.

The Aerospace Engineering graduates should:

i. Demonstrate the capacity to assume social, environmental and ethical responsibility in the national and global perspective.

ii. Be effective team members and influential leaders in research, design, innovation, implementation and operation of Aerospace related systems.

iii. Communicate effectively and possess an enduring desire for enhancing their knowledge and skills.

iv. Be responsive and adaptive to an increasingly diverse and challenging global environment.

7.2 **Program Learning Outcomes (PLOs)**

Program outcomes are the narrower statements that describe what students are expected to know and be able to do by the time of graduation. These relate to the knowledge, skills and attitude that the students acquire while progressing through the program. Specifically, it is to be demonstrated that the students have acquired the following graduate attributes (GAs):

**PLO1 Engineering Knowledge:** An ability to apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
PLO2 Problem Analysis: An ability to identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.

PLO3 Design/Development of Solutions: An ability to design solutions for complex engineering problems and design systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.

PLO4 Investigation: An ability to investigate complex engineering problems in a methodical way including literature survey, design and conduct of experiments, analysis and interpretation of experimental data, and synthesis of information to derive valid conclusions.

PLO5 Modern Tool Usage: An ability to create, select and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling, to complex engineering activities, with an understanding of the limitations.

PLO6 The Engineer and Society: An ability to apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice and solution to complex engineering problems.

PLO7 Environment and Sustainability: An ability to understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of, and need for, sustainable development.

PLO8 Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.

PLO9 Individual and Team Work: An ability to work effectively, as an individual or in a team, on multifaceted and/or multidisciplinary settings.

PLO10 Communication: An ability to communicate effectively, orally as well as in writing, on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PLO11 Project Management: An ability to demonstrate management skills and apply engineering principles to one’s own work, as a member and/or leader in a team, to manage projects in a multidisciplinary environment.

PLO12 Lifelong Learning: An ability to recognize the importance of, and pursue lifelong learning in the broader context of innovation and technological developments.

8. Program Salient Features

The undergraduate engineering program has been based on the following salient features:

- **Duration:** 4 years
- **Number of Semesters:** 8
- **Total number of credit hours:** 130 - 136
  - Engineering Domain: minimum 85 Credit Hours
  - Non-Engineering Domain: minimum 30 Credit Hours

  (HEIs have flexibility of 15 - 21 Credit Hours to add courses either in Engineering, Non-Engineering or both Domains to fulfill the program mission and objectives in line with the overall Vision of the Institute concerned.)

- **Additional Course or Credit Hours Requirements:** Any addition of course or credit hour requirements as per direction or policy of the Government (Provincial or Federal), HEIs have leverage to cater such needs over and above the prescribed requirements in this document.

- **Number of weeks per semester:** 15 - 18
- **Number of credit hours per semester:** 15 - 18

- **Curriculum:** The engineering curriculum is the most important instrument for grooming the students based on 12 Graduate Attributes (GAs) encompassed under the Program Learning Outcomes (PLOs). In order to inculcate different dimensions of thinking – mathematical, computational, design and creative – among students in Cognitive,
Psychomotor and Affective domains, the curriculum is based on the following knowledge profiles:

**WK1 - Natural Sciences:** A systematic theory-based understanding of natural sciences applicable to the discipline.

**WK2 - Mathematics and Computing:** The concept-based mathematical thinking, numerical analysis, statistics and formal aspects of computer and information science to support analysis and modeling applicable to the discipline.

**WK3 - Engineering Fundamentals:** A systematic, theory-based formulation of engineering fundamentals required in an engineering discipline.

**WK4 - Engineering Specialization:** The knowledge of engineering specialization that provides theoretical frameworks and bodies of knowledge for the accepted practice areas that are at the forefront in a discipline.

**WK5 - Engineering Design:** The design thinking knowledge that supports engineering design in a practice area of an engineering discipline.

**WK6 - Engineering Practice:** The knowledge of engineering practices (technology) in different practice areas of an engineering discipline.

**WK7 - Engineering in Society:** A systematic, comprehension-based knowledge of the role of engineers in a society and the professional issues related to practicing engineering profession in a discipline: ethics and the professional responsibility of an engineer to public safety including the impact of an engineering activity i.e. economic, social, cultural, environmental and sustainability.

**WK8 - Research Literature:** Engagement with selected knowledge in the research literature of the discipline.
The curriculum matrix covering above knowledge profiles should therefore be composed of non-engineering domain (humanities, math, management and natural sciences), and engineering domain with computer science, foundation, breadth, depth and multidisciplinary courses (including safety) so that different streams could be encouraged within each discipline, enabling students to undertake a range of **Complex Problem Solving** and **Complex Engineering Activities**. The students may select electives from any of the streams with guidelines from their respective advisors.

* As a specific or more than one knowledge profile to be covered.
Curriculum of Aerospace Engineering

- **Industrial Training:** Internship of at least 6 - 8 weeks is mandatory part of degree requirements towards 3rd to 4th year of program; must be supervised, monitored, evaluated, and reflected in the transcripts under a prescribed mechanism and with defined and mapped rubrics with program objectives;
  - Selection of internship in line with elective subjects/specific streams
  - Qualifying percentage based on the following weightages: 70%
    - At least 75% attendance is mandatory 10%
    - Assessment report from the employer 50%
    - Evaluation at relevant HEIs/ Deptt – presentation 40%

- **Final Year Design Project (FYDP)/ Capstone:** FYDP aims to challenge innovative, creative, technical, management and presentation skills of a graduate to bring together the learning over the degree program.
  - A final year design project (FYDP) is the confluence of an engineering program. Undertaking a final year design project is a compulsory requirement. It should mainly comprise literature search, individual analysis, modeling and simulation, AI (Artificial Intelligence) and computational data analytics, design and putting together various hardware, software, firmware and Algorithm Engineering / Informatics related to the program to demonstrate a functional concept including rapid prototyping, where applicable.
  - The FYDP shall include complex engineering problems and design systems, components or processes integrating core areas and meeting specific needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.
  - A project of this nature should invariably lead to an integration of the knowledge and practical skills as mandated in the program outcomes. In this context, projects of multidisciplinary nature should be encouraged.
  - The FYDP should span over two consecutive semesters, i.e. semester 7 & 8, totaling 6-credit hours and should be fully
supervised, assessed and reflected in the transcripts under a prescribed mechanism so as to prepare for joining industry after graduation.

- **Faculty**: The faculty must be trained for the Outcome-Based Education (OBE) system. Their familiarity with the program objectives and outcomes, understanding of the Outcome-Based Assessment (OBA) cycle, enthusiasm for developing an effective program, and the ability to become an active player in this regard are the keys to ensure the attainment of program objectives. The faculty is expected to have the ability to ensure proper implementation of the program, and to develop processes for evaluation, assessment and CQI. A formal training program to groom the faculty to become effective instructors in applying pedagogical skills in all aspects of Teaching, Learning and Assessment covering all domains of Knowledge, Skills and Attitude, should be instituted.

- **Personal Grooming**: Personal Grooming of young faculty members and students is very important in order to develop and support their professional skills. Therefore, it is required that HEIs should conduct/arrange sessions or counseling hours on regular basis to provide guidance for personal grooming. Personal Grooming is important for positive self-image and increasing the confidence level of the individuals. It would help in enhancing students’ self-esteem and would go a long way in developing an attractive personality by adopting habits like personal hygiene, clothing, appearance, interaction and expressive skills, etc. The students should be motivated and equipped to be entrepreneurs in their relevant field.

- **Presentation and Communication Skills**: Special focus should be given to inculcate communication and presentation skills amongst the graduates through individual and group presentations, technical writing and discussions, throughout the program as a regular feature.

This curriculum has been designed to guide and facilitate the universities and departments to formulate their own programs according to the industrial needs, emerging trends and recent developments in the field of Aerospace Engineering. The HEIs have flexibility to incorporate changes in the proposed curriculum within a given range of credit hours for engineering and non-engineering domains.

**Total Credit Hours** 135
Proposed List of Elective Courses – BE Aerospace Engg

- Computational Fluid Dynamics
- Turbulent Fluid Flow
- Rotorcraft Dynamics
- Applied/Industrial Aerodynamics
- Finite Element Methods
- Aero Vehicle Loading and Structural Analysis
- Advanced Mechanics of Materials
- Engineering Mechanics of Composite Structures
- Mechanical Behavior of Materials
- Structures and Machine Design
- Orbital Mechanics
- Spacecraft Dynamics and Control
- Inertial Navigation
- Guidance and Navigation of Aerospace Vehicles
- Celestial Mechanics
- Astrodynamics
- Advance Engineering Chemistry
- Industrial Control Electronics
- Automation and Robotics
- Mechanics of Machines
- Instrumentation and Sensors
- Modern Control Theory
- Manufacturing Processes and CNC Machines
- Digital Control System
- Systems Engineering and Analysis
- Space Astronomy
- Space Propulsion
- Heating, Ventilation and Air Conditioning
- Turbo Machinery
- Digital logic design and PLC’s
- Fuzzy Logic and Control
- Engineering Circuit Analysis – DC Circuits
- Analogue and Digital Circuits
- Professional Communication Skills
- Electrical Circuits and Machines
- Electronic Warfare
- Wind Tunnel Testing
- Statistical Quality Control
- Engineering Economy
- Production Management and Control
- Character Building and Leadership
- Computer Aided Design
- Product Design and Development
- Satellite Systems and Engineering
- Aeroelasticity
- Aeroacoustics
Curriculum of Aerospace Engineering

- Joining Technology for Modern Materials
- Flexible Manufacturing
- Introduction to Industrial Engineering
- Decelerator Aerodynamics
- Hovercraft Design
- Astronautics
- Spacecraft Design
- Tribology
- Occupational Safety and Health

Electives for Social Science

- Sociology for Engineers
- Professional Ethics
- Economics for Engineers
- Sociology
- Social Anthropology
- Understanding Psychology and Human
- Social Psychology
- Organizational Behavior
- Critical Thinking
- Philosophy
- Human Resource Development
- Culture and Society
- Engineering Law

Electives for Management Sciences

- Entrepreneurship
- Entrepreneurship and Marketing
- Engineering Project Management
- Principle of Management
- Engineering Management
- Quality Management Systems
- Textile Marketing
- Industrial Engineering and Management
- Total Quality Management
- Supply Chain Management
- Production Management

Courses for Computer Sciences

- Information and Communication Technologies (ICT)
- Artificial Intelligence
- Cyber Security
- Data Science
- Modeling and Simulation
- Computer Programming and Design
11. Program Specific Labs

The following labs specific to engineering discipline be ensured to cover relevant knowledge domains but not limited to:

- Aerodynamics Lab
- Propulsion and Heat Transfer Lab
- Structures Lab
- Material Science Lab
- Numerical Analysis Lab
- Fluid Dynamics Lab
- Flight Vehicle Dynamics Lab
- Instrumentation Lab
- Engineering Workshop
- Project & Research Lab

12. Course Details and Teaching-Assessment Approaches

In the following sections, Course Outlines and teaching-assessment approaches are given for guidance based on a typical semester system. The instructors may adopt or adapt accordingly defining CLOs, course delivery plan, innovative teaching approaches and assessment techniques.
12.1 Engineering Domain

Computer and Information Sciences Courses

Information and Communication Technologies (ICT)

Course Outline:

Introducing Computer Systems: Basic Definitions

- Computer and Communication Technology
- The applications of ICT - particularly for Engineers

Basic Operations and Components of a Generic Computer System

- Basic operations: Input, Processing, Output, Storage
- Basic components: Hardware, Software, Data, Users
- Types of storage devices

Processing Data

- Transforming data into information
- How computers represent and process data
- Processing Devices
- CPU architectures

The Internet

- The Internet and the World Wide Web- browsers, HTML
- URLs/ How DNS works
- Email and other programs

Introduction to Embedded Systems

- What is an Embedded System
- Applications
- Components
- Programming Languages
- Popular Development Platforms
Networking Basics

- Uses of networks
- Common types of networks (LAN, WAN, MAN etc.)
- Introduction to OSI Model
- Future of Networks

Database Management

- Hierarchy of Data
- Maintaining Data
- Database Management Systems

Exposure to ICT Tools and Blogs (Student Assignment)

Protecting your privacy, your computer and your data

- Basic Security Concepts
- Threats to users
- Threats to hardware
- Threats to Data

ICT in Education

Future Trends in ICT

Final Presentations

Tools / Software Requirement

- Microsoft Office, Windows, Virtual Box, Netbeans

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment

Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester final exam.
Suggested Books:

Computer Programming

Area Scope:

Introduction of computer programming (C++ / Fortran / VB / C#) and its implementation in aerospace engineering.

Course Outline:

- Give an overview of introduction to digital computers
- Explain the main components and functions of respective language i.e. C++ / Fortran/
- Explain elements of programming
- Illustrate the concept of flow charts
- Ensure practical training in programming using any language

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/Field Visits, Group discussion, Report Writing
Assessment:
Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester final exam.

Suggested Books:
- The Art of Computer Programming (TAOCP) by Donald E. Knuth, 1968.

Numerical Methods

Course Outline

Error Analysis and Interpolation
- Error analysis, Types of error, Sources of error, Norms of vectors and matrices, Computer arithmetic, Condition number of a matrix, Significant digits and loss of significant digits, Floating point arithmetic, Binary and decimal representation, Single and double precision.
- Interpolation: Newton forward and backward difference formula for interpolation, Central difference interpolation formulae, Lagrange’s interpolation, Error in interpolation, linear least square approximation, Interpolation versus least square approximation, relevant engineering case studies.

Numerical Differentiation and Integration
- Derivation of numerical differentiation of first order and second order derivatives using two points, three points, and five points formulas along with its application in engineering, Relevant case studies
- Numerical integration: Trapezoidal rule, Simpson’s rules, Composite Trapezoidal Simpson Rules and Romberg integration, Applications of numerical in engineering, Relevant case studies
Methods of Solution for a System of Linear Equations

- Solution of system of linear algebraic equations, Gauss elimination method
- LU factorization, Tridiagonal solver
- Applications of these methods in engineering disciplines, Relevant case studies

Iterative Methods for Linear and Nonlinear Equations

- Numerical Solution of nonlinear equations: Bisection method, Newton’s method, Secant method, Convergence analysis of these methods
- Newton’s method for system of nonlinear equations
- Solution of system of linear equations by Jacobi, Gauss Seidel and SOR methods, Applications of these methods in engineering disciplines, Relevant case studies

Numerical Methods for IVPs and BVPs

- Euler’s method and its variations, Taylor’s higher order methods, Error analysis, Consistency, stability and convergence
- Runge-Kutta methods of order 2, 3, and 4, Stiff ODEs, Consistency, stability and convergence
- Linear multistep methods, Numerical solution of system of ODEs
- Numerical solution of BVPs by Finite Difference Method
- Applications in engineering: Some relevant case studies

Numerical Methods for Computing Eigenvalues

- Eigenvalues and Eigenvectors of matrix: power method,
- Inverse power method, Shifted inverse power method.
- Applications of eigenvalues in engineering disciplines.

Numerical Optimization

- Unconstrained Optimization,
- Golden search ratio, Lagrange Multipliers,
- Method of steepest descent
- Applications of optimization in engineering disciplines
Teaching Methodology (Proposed as applicable): 

Lectures (audio/video aids), Written Assignments/Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/Field Visits, Group discussion, Report Writing

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignments, Project Report, Quizzes, Semester final exam.

Suggested Books:

Computer Aided Drawing

Course Outline:

- Introduction to AutoCAD
- Use basic drawing and text commands
- Use basic editing commands (move, copy, erase, etc)
- Use advanced editing commands (mirror, fillet, etc)
- Dimensioning capabilities of Auto CAD
- Create and use layers
Curriculum of Aerospace Engineering

- Print or plot a drawing
- Create and using blocks
- Be familiar with hatching capabilities of Auto CAD
- Curves
- 3D modeling
- Multiple Lines
- Geometric Shapes
- Isometric drawings
- Polar Arrays

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:

Mid semester exam/One hours tests, Report writing/ Presentation, Assignments, Lab/Project Report, Quizzes, Semester final exam.

Suggested Books:

- AutoCAD® 2015 And AutoCAD Lt® 2015 No Experience required by Donnie Gladfelter.
- Electronic PCB Design software Tutorials.
Artificial Intelligence

Course Outline

This course gives a broad overview of the fundamental theories and techniques of Artificial Intelligence.

- Overview of AI Problems;
- Intelligent Behavior: Turing Test, Rationale versus Non-rationale Reasoning;
- Problem Characteristics: Fully versus Partially Observable,
- Single versus Multi agent; Intelligent Agents: reactive, deliberative, goal-driven, utility-driven, and learning agents; Uninformed Search: Depth First, Breadth First, Depth First with Iterative Deepening;
- Informed Search: Hill climbing, A*- Search and their Time and Space Complexity, Local Search, Genetic Algorithm; Game Playing: Minimax, Evaluation functions, Alpha-beta pruning; Propositional and Predicate Logic; Resolution and Theorem Proving; Forward and Backward Chaining;
- Machine Learning: Introduction,

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/Quizzes, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:

Mid-term, Report writing/Presentation, Assignment, Project report, Quizzes, Final exam.

Suggested Books:

Curriculum of Aerospace Engineering

Engineering Foundation Courses

Introduction to Aerospace Engineering

Course Outline:

- Provide an overview of the history of aerospace and fundamental elements of aerodynamics.
- Provide an overview of historical experimentation in aerospace.
- Ensure an understanding of the basics of airfoils and wings.
- Develop the concept of the performance, stability and control of an airplane.
- Explain various aircraft propulsion systems.
- Explain the basics aircraft structures and avionics.
- Give an introduction of the aerospace vehicle conceptual design.
- Introduce to space environment, orbital mechanism satellite system engineering.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Mechanics of Materials

Course Outline:

- Principles of stress and strain.
- Hook’ Law and its application.
- Statically determinate and indeterminate problems in axial and shear modes.
- Shear force and bending moment diagrams.
- Flexural and shear force for beams.
- Theory of torsion; thin walled pressure vessel.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Engineering Thermodynamics

Course Outline:

Introduction and Basic Concepts:

Energy, Energy Transfer and General Energy Analysis:

Properties of Pure Substances:
Pure Substance, Phases of a Pure Substance, Phase-Change Processes of Pure Substance, Property Diagrams for Phase-Change Processes, Property Tables, The Ideal-Gas Equation of State, Compressibility Factor—A measure of Deviation from Ideal-Gas Behavior, Other Equations of state.

Energy Analysis of Closed Systems:

Mass and Energy Analysis of Control Volumes:

The Second Law of Thermodynamics:
Introduction to the Second Law, Thermal Energy Reservoirs, Heat Engines, Refrigerators and Heat Pumps, Perpetual Motion Machines, Reversible and

**Entropy:**

**Exergy--A Measure of Work Potential:**

**Gas Power Cycles:**

**Teaching Methodology (Proposed as applicable):**

Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

**Assessment:**

Mid semester exam/one hour test, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

**Suggested Books:**

Incompressible Aerodynamics

Course Outline:

- Concept of incompressible fluid flows.
- Statics and Dynamics fluid flows
- Calculation of the mass flow rate, forces and energy flux.
- Analysis of potential flows and their superposition.
- Dimensional analysis and boundary layer theory.
- Comparison of ideal and real flows.
- Characteristics of airfoil
- Thin airfoil theory
- High lift devices
- Wing characteristics
- Prandtl’s lifting line theory and drag on the aircraft.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Engineering Mechanics-I (Statics)

Course Outline:

- Develop the ability to solve the complex;
  - Force Systems
  - Moments
  - Couples and resultants
  - Moment of interties
- Free body diagram concept and equation of equilibrium in two and three dimensions.
- Analysis of two and three-dimensional problems.
- Application of equilibrium principles to simple trusses, frames and machines.
- Frictional effects and fluid statics.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.
Suggested Books:

**Engineering Mechanics-II (Dynamics)**

Course Outline:

- Kinematics of Particles,
- Develop detailed understanding of the three basic methods:
  - Force-mass-acceleration
  - Work-energy
  - Impulse-momentum.
- Concept of the equations of relative velocity and relative acceleration.
- Vector geometry, problems and solutions.
- Basic equations for all categories of plane motion.
- Equation of motion in rotating frames.

**Teaching Methodology (Proposed as applicable):**

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

**Assessment:**

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.
Suggested Books:

Material Science and Engineering

Course Outline:

- Fundamentals of both conventional and advanced materials and its application in aerospace engineering
- Internal atomic structure, crystal structures and crystal systems in metals.
- Structural imperfection, phase diagrams and their analysis.
- Concept of manufacturing processes of ferrous and non-ferrous materials and their mechanical properties, heat treatment, surface treatment and TTT diagrams.
- Introduction of polymers, polymer composites, type of fibers, metal matrix composites, ceramic matrix composites, inter metallic composites, powder metallurgy, conductors and magnetic materials.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/ one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.
Curriculum of Aerospace Engineering

Suggested Books:

Workshop Technology

Course Outline:

- Information and safety aspects in the field of general engineering workshop technology and practices.
- Introduction to commonly used metals, measurement and layout tools used in metalworking shops.
- Introduction to different hand tools, fasteners, taps and dies, drill machines, sawing and cutoff machines and grinding machines.
- Soldering, brazing, gas welding, arc welding and other modern welding techniques are covered.
- Introduction to woodworking with emphasis on commonly used woods and joints.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

**Engineering Drawing**

**Course Outline:**

• Various types of Orthographic Drawings
• Graphical geometry and then continues with progressive practice in making and understanding of various types of orthographic drawings.
• Give detailed emphasis on:
  o Principle Views,
  o Auxiliary Views
  o Sectional Views.
• Concept of Assembly level drawings

**Teaching Methodology (Proposed as applicable):**

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

**Assessment:**

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

**Suggested Books:**

Curriculum of Aerospace Engineering

- Electronic PCB Design software Tutorials
- Class handouts
- Software manual and tutorials.

Computer Aided Drafting

Course Outline:

- Detail introduction of the computer software to be used during the course.
- Enabling the students to make 2-D drawings with the help of CAD software such as Solid Edge/ CATIA etc.
- Familiarize the students with various 2-D drawing commands including the dimensioning commands and advanced editing techniques and drafting of 3-D drawings on computers.
- Familiarize the students with various basic and advanced 3-D drawing commands for enabling them to draft any type of 3-D drawing on the computers in a perfect, precise and efficient manner.
- Ensure the in depth understanding of 3D CAD parts and finally transforming the individual parts into complex assemblies.
- Introduction to the CAD Auto LISP software

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

• Electronic PCB Design software Tutorials.
• Class handouts.
• Software manual and tutorials.

Engineering Breadth Courses

Heat and Mass Transfer

Course Outline:

Basics of Heat Transfer:

Why heat transfer study, Relation of heat transfer to thermodynamics, Heat and other forms of energy, Heat transfer modes / mechanisms, Thermal conductivity & diffusivity, Simultaneous heat transfer mechanisms.

Heat Conduction:

Convection Heat Transfer:

Introduction, Physical mechanism of convection, Classification of fluid flows, Velocity and thermal boundary layers, Laminar and turbulent flows, Differential convection equations, Fluid friction and heat transfer, Heat transfer in high speed flow, Liquid metal heat transfer, External forced convection, Internal forced convection, Heat transfer in flows over bodies, Thermal insulation, Natural convection, Free convection and empirical relations, Non Newtonian fluids, Simplified equations of air, Combined free and forced convection.
Heat Transfer by Radiation:
Introduction, Thermal radiation, Blackbody radiation, Radiation properties, Radiation view / shape factor, View factor relations, Heat exchange between non-black bodies, Radiation shields.

Heat Exchangers:

Mass Transfer:
Analogy between heat and mass transfer, Mass diffusion, Fick’s law of diffusion, Mass transfer Coefficient, Water vapor migration in buildings, Diffusion in a moving medium, Simultaneous heat and mass transfer.

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:
Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:
Aerospace Instrumentation

Course Outline:

- Measurement standards and dimensional units of measurement, sensors, and counters.
- Displacement and dimensional measurements
- Stress & strain measurement
- Fluid flow measurement
- Temperature measurement
- Motion measurement.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/Quizzes, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/Field Visits, Group discussion, Report Writing

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignments, Project Report, Quizzes, semester final exam.

Suggested Books:

Aerospace Vehicle Performance

Course Outline:

- Basic performance characteristics.
- Standard atmosphere and aircraft/static system of an aircraft.
- Concept of performance parameters such as endurance, aircraft ceiling, range, climb, descent and glide, take-off and landing performance.
- Accelerated performance parameters using Energy State Approximation and results are compared with exact solutions.
Curriculum of Aerospace Engineering

- Turning performance both instantaneous and sustained.
- Flight mechanics and performance evaluation of a spacecraft.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Compressible Aerodynamics

Course Outline:

- Wave propagation and speed of sound
- Notion of isentropic flow through variable area.
- Overview of converging and converging-diverging nozzles and formation of normal shock waves and their application to wind tunnel and supersonic diffusers.
- Introduce oblique shock waves and Prandtl-Mayer flow and its application to supersonic airfoils.
- Overview of flows with friction and heat addition.
Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:
Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Aerospace Structures-I

Course Outline:
- Overview of the structural theory that is common to all types of aerospace vehicles.
- Load and temperature environment of the aerospace vehicles
- Introduction to ‘Theory of Elasticity’.
- Introduce the theories of bending, extension, torsion, and shear of slender beams without structural discontinuities
- Deflection analysis of beams.

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.
Curriculum of Aerospace Engineering

Assessment:
Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Stability & Control

Course Outline:
- Static longitudinal, directional and lateral stability with respect to vehicle axis system.
- Effects of various major components on static stability, critical flight conditions and controls.
- Introduction to dynamic stability, the axes system inertial and rotating axes and their transformations.
- Overview of the linearization of vehicle equations of motion, Laplace transform, stability derivatives, transfer functions, vehicle dynamic response to external disturbances and controls.

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:
Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.
Suggested Books:

**Engineering Depth Courses**

**Aerospace Vehicle Design**

**Course Outline:**

- Conceptual design of various types and categories of aerospace vehicle.
- Study of following activities:
  - Design layout
  - Design analysis.
  - Configuration layout
  - Pay-load considerations
  - Aerodynamics and propulsion
  - Structures and loads.
  - Weights, stability and control
  - Performance and trade studies.
- The student is required to prepare and present a conceptual design of a complete aerospace vehicle based on certain given specifications.
- Extensive use of computers must be ensured to refine the designed vehicle.
Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:
Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Structural Dynamics and Aero-Elasticity

Course Outline:
- Introduction to the Fundamentals of vibration, discrete and continuous systems.
- Free and Forced vibratory SDOF systems, harmonic vibration, rotating unbalance, base excitation.
- Vibration isolation, transient vibration, systems with two degrees of freedom.
- Fundamentals of aero-elasticity (static and dynamic).

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:
Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.
Suggested Books:

- Dewey H. Hodges, Introduction to Structural Dynamics and Aeroelasticity.
- Journals / Periodicals.
- International Journal of Structure Stability & Dynamics
- Structural Dynamics & Vibrations

Propulsion and Power Plants

Course Outline:

Introduction to Gas Turbine:

Describe the Brayton cycle (gas turbine cycles), components and their thermodynamic properties, aircraft propulsion (turbojet, turboprop, and ramjet), industrial application, future possibilities.

Gas Turbine Cycle Arrangements:

Explain the open loop cycle, closed loop cycle, single shaft arrangement, multi shaft arrangement, and multi spool arrangement.

Shaft Power Cycles:

State the ideal cycles, assumptions for ideal cycle, simple gas turbine.

Aircraft Propulsion:

Interpret performance criteria, propulsive efficiency, thermal efficiency, overall efficiency, fuel ratio, TSFC, international standard atmosphere, component numbering (turbojet, turbofan, turboprop, and ramjet).
Curriculum of Aerospace Engineering

**Parametric Analysis:**

Give an introduction to notation, design inputs, temperature and pressure relationships in terms of ratios, steps for parametric analysis, assumptions for ideal gases, ideal turbojet, cycle analysis (turbojet), calculations, optimum compressor ratios, ideal turbofan, cycle analysis, optimum bypass ratios, ideal turboprop engine, cycle analysis, optimum turbine temperature, ideal ramjet engine (analysis).

**Centrifugal Compressor:**

Describe the principle of operation, work done and pressure ratio, diffuser, compressibility effects, and characteristics.

**Axial Flow Compressor:**

Explain the basic operation, elementary theory, design process. Combustion system: operational requirements, types of combustion chambers, factors effecting combustion, combustion process.

**Intake and Propelling Nozzles:**

Understand the working of Intake Diffusers, Propelling Nozzles.

**Teaching Methodology (Proposed as applicable):**

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

**Assessment:**

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

**Suggested Books:**

• Journals / Periodicals
• Jack D. Mattingly. Elements of Gas Turbine Propulsion. (1st ed.).
• Journal of Propulsion & Power

Control Systems

Course Outline:

• Fundamentals of linear control system, mathematical modeling of physical systems, including both electrical and mechanical systems
• Concept of the digital computer as a tool for solution of differential equations and linear systems, transient and steady state response
• Open and closed loop response involves time domain analysis and frequency response analysis
• Classification of control systems and feedback control system such as Transient response, steady-state accuracy and disturbance rejection are taught during the latter part of the course
• Root locus, Routh’s criterion, Bode plot, Nyquist criterion and signal flow graphs
• Different type of controllers such as Proportional, phase-lead, phase-lag and PID are used to achieve desired transient and steady state response
• Multivariable input-output system such as state space system and its close loop response

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.
Curriculum of Aerospace Engineering

Assessment:
Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Product Design and Development

Course outline:
- Understand the basic functions involved in design and development processes of a new product
- Analyze the customer needs for a new product development

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written Assignments/ Quizzes, Case Studies relevant to engg disciplines, Design Project, Group discussion, Report Writing.

Assessment:
OHTs, Report writing/Presentation, Assignments, Project Report, Quizzes, Semester final exam.

Suggested Books:
Manufacturing Processes and CNC Machines

Course Outline:

- Introduction: Basic concepts of manufacturing processes
- Casting and Moulding: Metal casting processes and equipment, Powder metallurgy, Plastics
- Forming: Extrusion and drawing, sheet metal forming, forming and shaping plastics and composite materials
- Metal Cutting Theory/ Cutting Tools
- Machining: Conventional and non-conventional machining processes
- Joining: Welding, brazing, soldering, sintering, adhesive bonding, fastening, Press fitting
- Glass making/float glass process, blow moulding, spinning etc.
- Additive Manufacturing: 3D Printing.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, Semester final exam.

Suggested Books:

Computationional Structural Analysis

Course Outline:

- Understanding the finite element methods for the analysis of structures.
- Comparison of analytical approach with the finite element methods.
- Concept of stiffness of a spring and then builds up to formulate element stiffness matrix for different element using the Hooke’s law and energy theorems.
- Principle of Virtual Work and Minimum Potential Energy
- The load vector and displacement vectors
- Method of solution to solve the model to determine the displacements of the structure at the nodes.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:

Mid-exam, Report writing/Presentation, Assignment, Project report, Quizzes, Final exam/assessment.

Suggested Books:

Multidisciplinary Engineering Courses

Electric Circuits and Machines

Course Outline:

- Theory and applications of electric circuits and machines for Aerospace majors.
- Derive and explain the concept of:
  - Impedance, admittance and transient.
  - Phasor notation in the solution of AC circuits.
  - Circuit laws, network theorems.
  - Resonance.
  - Power and energy.
- DC machines (DC generator and DC motor), alternator, transformer etc.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/Field visits, Group discussion, Report Writing.

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignment, Project report, Quizzes, semester final exam.

Suggested Books:

Electronics, Analogue & Digital Circuits

Course Outline:

- Develop the ability of aerospace students to understand digital computer fundamentals and semiconductor based electric circuits.
- Fundamentals of digital computer design.
- Concept of semiconductor theory.
- Functions/operations of diodes and its applications, Transistors and its terminal characteristics.
- Notion of biasing of transistor circuits
- Concept of DC and AC load lines, which is followed by the analysis of various transistor amplifier configuration.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:

Mid-exam, Report writing/Presentation, Assignment, Project report, Quizzes, Final exam/ assessment.

Suggested Books:

Occupational Health and Safety

Course Description:
This course introduces the student to the study of workplace occupational health and safety. The student will learn safe work practices in offices, industry and construction as well as how to identify and prevent or correct problems associated with occupational safety and health in these locations as well as in the home.

Learning Outcomes:
Upon successful completion of this course, the student will be able to:

1. Identify hazards in the home, laboratory and workplace that pose a danger or threat to their safety or health, or that of others.
2. Control unsafe or unhealthy hazards and propose methods to eliminate the hazard.
3. Present a coherent analysis of a potential safety or health hazard both verbally and in writing, citing the Ontario Occupational Health and Safety Regulations as well as supported legislation.
4. Demonstrate a comprehension of the changes created by WHMIS and OSHA legislation in everyday life.

Course Outline:
Health and Safety Foundations
a. Nature and scope of health and safety
b. Reasons/benefits and barriers for good practices of health and safety
c. Legal frame work and OHS Management System

Fostering a Safety Culture
a. Four principles of safety- RAMP (Recognize, Assess, Minimize, Prepare)
b. Re-thinking safety-learning from incidents
c. Safety ethics and rules
d. Roles and responsibilities towards safety
e. Building positive attitude towards safety
f. Safety cultures in academic institutions
Recognizing and Communicating Hazards

a. Hazards and Risk
b. Types of hazards: Physical (mechanical and non-mechanical), Chemical (Toxic and biological agents), electrical, fire, construction, heat and temperature, noise and vibration, falling and lifting etc.
c. Learning the language of safety: Signs, symbols and labels

Finding Hazard Information

a. Material safety data sheets
b. Safety data sheets and the GHS (Globally Harmonized Systems)

Accidents & Their Effect on Industry

- Costs of accidents
- Time lost
- Work injuries, parts of the body injured on the job
- Chemical burn injuries
- Construction injuries
- Fire injuries

Assessing and Minimizing the Risks from Hazards

- Risk Concept and Terminology
- Risk assessment procedure
- Risk Metric’s
- Risk Estimation and Acceptability Criteria
- Principles of risk prevention
- Selection and implementation of appropriate Risk controls
- Hierarchy of controls

Preparing for Emergency Response Procedures

- Fire
- Chemical Spill
- First Aid
- Safety Drills / Trainings:
  - Firefighting
  - Evacuation in case of emergency
Stress and Safety at Work Environment

- Workplace stress and sources
- Human reaction to workplace stress
- Measurement of workplace stress
- Shift work, stress and safety
- Improving safety by reducing stress
- Stress in safety managers
- Stress and workers compensation

Incident Investigation

- Importance of investigation
- Recording and reporting
- Techniques of investigation
- Monitoring
- Review
- Auditing Health and Safety

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), written assignments/quizzes, tutorials, case studies relevant to engineering disciplines, semester project, guest speaker, industrial/field visits, group discussion, report writing

Assessment:

Mid-semester exam, report writing/presentation, assignment, project report, quizzes, end-semester exam

Suggested Books:

12.2 Non-Engineering Domain

**English Courses**

**Functional English**

**Area Scope:**

The knowledge units in this area collectively encompass the following:

- Follow English vocabulary and skills to use it in professional life.
- Identify common errors usually made by the Learners of English as a second language.
- Practice English correctly in speaking and writing.

**Course Outlines:**

- Public Speaking
- The Art of Creating a PowerPoint Presentation.
- Interacting with the Opposite Gender
- Classroom Etiquettes and Teachers’ Expectations
- Articles
- Prepositions
- Homophones
- Punctuation
- Tenses in English Grammar
- Formal Letter Writing
- Summary writing
- Organizing and planning your writing
- Sensory Perception in writing
- Critical thinking
- Final Year Project

**Teaching Methodology (Proposed as applicable):**

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing.
Assessment:

Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Final semester exam.

Suggested Books:

- P. C. Wren & H. Martin “High School English Grammar & Composition”.
- Colin W. Davis & Andrew J. Watts New Expressway For English 1 (New Edition)
- Hert A. Murphy & Herbert William Hildebrandt. Effective Business Communications
- Diana Hacker. A Writer’s Reference

Communication Skills

Area Scope:

The knowledge units in this area collectively encompass the following:

- Communicate effectively using intermediate- to-advanced level English while developing the understanding of essentials of communication skills.
- Participate in group discussions by attentive listening, questioning to clarify ideas, eliciting responses, or disagreeing in a constructive way.

Course Outlines:

By the end of the semester students will have skills including:

Writing Skills

- Vocabulary Building
- Writing Skills: Essays and Letters
- Common Writing Errors
- Purposeful Writing

Reading Skills

- Skimming and Scanning
Curriculum of Aerospace Engineering

- Critical Reading
- Reading for Understanding
- Techniques and strategies to develop sound vocabulary.

Listening Skills
- Introduction to Communication Process
- Seven Cs of Communication
- Types of Listening
- Listening for Comprehension

Speaking Skills
- Verbal and Non-Verbal Communication
- Basics of Presentation Skills
- Presentation Strategies and public speaking skills.
- Use of Audio-Visual Aids
- Basics of Group Communication
- Listening Skills
- Communicate effectively in job interviews.

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:
Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester final exam.

Suggested Books:
- Anchor in English-II (Lessons 1-5), A SPELT Publication
- Christopher Fry, “Summary Writing (Book-I)”, Oxford University Press
- College Essays by John Langland
- Barron’s TOFFL iBT Edition
- Communication Skills for Engineers by Sunita Marshal and C. Muralikrishn.
Technical Writing and Presentation Skills

Area Scope:
The knowledge units in this area collectively encompass the following:

- The students will be able to write technically correct statements, assignments, final year project report, project proposal, short report and research paper
- The students would be able to write CV, cover letter and business/professional Correspondence meeting all criteria
- The students would be able to present their work/research at a technical forum.

Course Outlines:

- Introduction to Technical writing
- Proposal write-up and improvement strategies
- Introduction to research and research types
- Choosing research problems and research advisors
- How to carry out research
- Formulation – Problem statement, Literature
- Review
- Design - Methodology
- Analysis - Data analysis and interpretation
- Good writing style techniques
- Uses of correct words
- Presenting and publishing research
- Write business/professional correspondence, cover letter and CV
- Writing meeting minutes.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/Field Visits, Group discussion, Report Writing

Assessment:

Mid semester exam/one hour tests, Report writing/Presentation, Assignments, Project Report, Quizzes, Semester final exam.
Suggested Books:

- Writing for Computer science by Justin Zobel Research Methodologies – A step by step guide for beginners, Ranjit Kumar.

Mathematics Courses

Linear Algebra

Area Scope:

The knowledge units in this area collectively encompass the following:

- To comprehend basic concepts of Linear Algebra and optimization
- To apply techniques of Linear Algebra and optimization for solution of engineering problems

Course Outline:

System of Linear Equations and Applications

- Overview of linear system of equations, Cases of unique solution, No solution and infinite solutions,
- Echelon form, Gauss elimination method, Inversion of matrix in the context of solution of system of equations, LU factorization, Row space and column space
- Relevant engineering case studies such as Network analysis, Traffic Flows, Balancing chemical reaction, Leontief Input-output model, finding max stress in compound cylinder, Applications of linear systems in force balancing of structures, Markov process.

Vector Spaces and Transformations

- Vector Spaces: Real vector spaces, Subspaces, Basis and dimension, Rank, Nullity
Gram-Schmidt process for finding orthonormal basis

Linear Transformation, Kernel of Transformation, Range of Transformation, Matrix of Transformation

Applications: Cryptography, Coding and decoding, Breaking of codes, Robotic Applications of linear transformations

Eigenvalues and Eigen Vectors

- Eigenvalues, Eigenvectors, Similar matrices, Diagonalization,
- Quadratic forms, Positive definite Matrices, Singular Value Decomposition, Inner product Spaces
- Applications of linear Algebra: Constructing curves and surfaces, Computer graphics, Genetics.

Linear Programming

- Introduction to linear programming, Optimization, Graphical method, Simplex method, Optimization problems in engineering and economics
- Dual simplex methods, Duality theory, Primal and dual problems, transportation models, north-west corner, least-cost and Vogel’s approximations methods,
- Assignment model, the transshipment model and other relevant engineering case studies

Application of Linear Algebra in Dynamical Systems

- Numerical System of linear ODEs, Eigenvalue problems, Homogeneous and nonhomogeneous system of ODE.
- Dynamical systems, Population dynamics, Prey-Predator models, Stability analysis

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:

Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester final exam.
Suggested Books:

**Calculus and Analytical Geometry**

**Area Scope:**

- To develop a clear understanding of fundamental concepts of single variable calculus.
- To apply concepts of differentiation and integration to solve complex engineering problems.

**Course Outline:**

**Analytical Geometry:**

- Review of vectors, scalars and vector products.
- Three dimensional coordinate system and equation of straight line and plane

**Functions Limit and Continuity:**

- Review of functions and graphs,
- Limits & Continuity,
- Techniques of Finding Limits,
- Discontinuity
- Limits of Sine and Cosine and Exponential Functions

**Differentiation:**

- Introduction to Derivatives
- Examples of Derivatives
- Derivative as Rate of Change
- Derivative’s Rules
• Implicit Differentiation
• Higher order derivatives
• Leibnitz Theorem

Applications of Derivatives:
• Monotonic functions
• Optimization problems
• Relative and Absolute extrema
• First and second derivative tests
• Point of inflection
• Concavity
• Curvature
• Indeterminate Forms and L’ Hopital rule
• Differentials

Integration:
• Integrals and Properties of Integrals
• Techniques of Integration
• Integration by Parts
• Definite Integrals
• Integration of Trigonometric
• Exponential and Inverse Functions
• Integration by Partial Fractions
• Reduction Rules

Applications of Integration:
• Applications of Integration
• Area under the curve
• Area between curves
• Solids of Revolution
• Volume of Solids of revolution by disk washer, Cylindrical shell & Cross Section Methods
• Center of Pressure and Depth of Center of Pressure
• Center of mass
• Arc length
Curriculum of Aerospace Engineering

Improper Integrals:
- Improper Integral
- Integrals and Singularities
- Convergence of improper integrals

Infinite Sequence and Series:
- Sequence and Infinite Series
- Convergence and Divergence of sequences and series
- Positive Term Series
- Integral Test
- Basic Comparison Test
- Limit Comparison Test
- Ratio and Root tests
- Alternating series
- Absolute and Conditional Convergence

Power and Taylor Series:
- Power Series
- Maclaurin and Taylor Series and their applications.

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:
Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester final exam

Suggested Books:
- Thomas' Calculus by George B. Thomas, Jr., Maurice D. Weir, Joel R. Hass, Pearson, USA.
- Swokowski, Onlinick & Pence: Calculus
- Robert T. Smith & Roland B. Minton: Calculus
- Calculus: Early Transcendentals by James Stewart. Brooks/Cole USA.
Differential Equations

Area Scope:

The knowledge units in this area collectively encompass the following:

- To define basic mathematical concepts related to differential equations
- To describe different types of analytical methods for solution of differential equations
- To formulate different engineering problems in the form of differential equations

Course Outline:

Basic Concepts and Modeling

- Linear Differential equations, Non-Linear Differential equations, Solutions of differential equations, General solutions, Particular solution, Initial and boundary value problems, Degree and order of ODEs
- Formulation of first-order ODEs: Case studies related to finding age of fossils, Mixing problems and free fall motion, finding temperature of a building, RL, RC circuits, Airplane take-off problem, Population dynamics and logistic equations etc.
Curriculum of Aerospace Engineering

Analytical Methods of Solution for First-order ODEs

- Variable separable method, Reduction to variable separable form, Homogeneous equations, Differential equations reducible to homogeneous form, Solution of the related ODE models by these methods
- Exact equations, Integrating factors, Linear equations and related examples, Bernoulli’s equations, Orthogonal trajectories and solution of the related ODE models by these methods

Mathematical Models Based on Second-order ODEs

- Formulation of a single RLC circuit, Spring mass systems, Earthquake model of a single story building
- Bungee Jumper model, Bridge collapse problem etc.

Analytical Methods of Solution for Second-order ODEs

- Homogeneous linear ODEs, Method of reduction order, Wronskain determinant to check independence of the solution, and related examples
- Cauchy-Euler equations and related examples, Non-homogeneous linear ODEs, Method of undetermined coefficients
- Method of variation of parameters and related example
- Analytical solution of the related ODE models by these methods

Series Solution for Second-order ODEs

- Series solution of ODEs and convergence tests.
- Series solution of Legendre equation, Frobenious method of solution for Bessel equation and related applications.

Laplace Transform

- Laplace Transform, Derivation of Basic formulae, Inverse Laplace Transform, First shift theorem
- Laplace transform of integrals and derivative, Solution of second order ODEs by Laplace Transform, Unit step function and its Laplace transform, Second shift theorem, Convolution
- Application of Laplace transform to a system of ODEs and related applications
Partial Differential Equations

- Partial Differential Equations and their types, Applications of partial differential equations in Engineering
- Separation of Variables Method (SVM) and solution of wave equation by the SVM
- Solution of heat equation by the SVM

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:

Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester final exam.

Suggested Books:

Probability & Statistics

Area Scope:
The knowledge units in this area collectively encompass the following:

- To understand the basic concept of Statistics and Probability and their need in engineering.
- To Describe properties and classifications of probability density functions, regression analysis and interval estimation
- To Apply different probability and statistics techniques in engineering problems

Course Outline

Basic Statistics

- Statistics, Branches of Statistics, Importance of statistics, population, sample, observation, variables, measurement of variable, Data, primary data, secondary data

Data Presentation

- Frequency distribution (grouped, ungrouped), stem and leaf display, histogram, frequency polygon, cumulative frequency polygon, Simple & Multiple Bar diagrams

Measure of Central Tendency

- Arithmetic Mean (A.M), Geometric Mean (G.M), Harmonic Mean (H.M), Quantiles (Median, Quartiles, Deciles, Percentiles), Mode, Applications of Averages

Measure of Dispersion

- Background, Range, Quartile deviation, Mean deviation, Variance, Standard deviation, Coefficient of variation, Moments, Moments ratios, Skewness, Kurtosis
- Applications in different Engineering Disciplines

Simple Regression, Correlation and Curve Fitting

- Introduction to regression theory, Simple linear regression line, Line fitting by least square methods, Coefficient of determination,
• Simple correlation, coefficient of correlation, fitting of a first and second degree curve, fitting of exponential and logarithmic Curves, related problems.
• Principle of least squares.

Probability and Random Variables

• Probability review, Laws of probability, Conditional probability, Bayesian theorem, independent, dependent events.
• Random variables, Discrete and Continuous random variables, Probability mass and density functions, Distribution functions, Mathematical expectation,
• Variance of random variable, Bivariate distribution, Joint probability distribution, Moment generating function

Probability Distributions

• Discrete distributions:
• Bernoulli distribution, Binomial, Geometric, Negative binomial, Hypergeometric, Poisson distribution, Properties and application of these distributions.
• Continuous Distributions: Uniform Distribution, Exponential distribution, Normal distribution, Applications

Sampling and Sampling Distributions

• Introduction, Population, Parameter & Statistic, Objects of sampling, Sampling distribution of Mean, Standard errors, Sampling & Non-Sampling Errors,
• Random Sampling, Sampling with & without replacement, Sequential Sampling, Central limit theorem.
• Applications in relevant engineering discipline

Statistical Inference and Testing of Hypothesis

• Introduction to inferential statistics, Estimation, hypothesis testing of population mean, proportion.
• Variance, Applications in Engineering
Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:

Mid semester examination/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, semester final exam.

Suggested Books:

- Introduction to Statistical theory part 1, by Sher Muhammad Chaudary (Latest Edition)
- Probability and Statistics for Engineers and Scientists, by Antony Hayter.
- Elementary Statistics, by Bluman.

Multivariate Calculus and Transforms

Area Scope:

The knowledge units in this area collectively encompass the following:

- To develop a clear understanding of fundamental concepts of multivariable variable calculus
- To describe of the concept of gradient, multiple integrals in rectangular, polar, cylindrical and spherical coordinates, directional derivatives, and optimization problem.
- To apply the concepts line integrals, surface integrals, volume integrals, Green's, Stokes', Gauss theorems to different engineering problems
- Apply various transforms to solve complex integration.

Course Outline:

Geometry of Space:

- Analytical Space Geometry, Cylindrical and Spherical coordinates, Lines in space, Intersection of Line and a Plane.
Vector-Valued Functions and Motion in Space:
- Functions of several variables, their limits and continuity, Quadratic Surfaces, Parametric representation of curves, Velocity and Acceleration, Arc length, Tangent, Normal, Bi-normal, Curvature & Torsion.

Partial Differentiation:
- Partial derivatives, Total Differentials, Chain Rule with More Variables, Directional derivatives

Applications of Partial Derivatives:
- Optimization Problems, Extrema of functions of several variables, Conditional extrema, Lagrange Multipliers and Example.

Multiple Integrals:
- Double Integration, Order of Integration, Double Integrals in Polar Coordinates, Applications: Mass and Average Value, Moment of Inertia, Triple Integrals, Rectangular and Cylindrical Coordinates, Applications and Examples, Triple Integrals in Spherical Coordinates.

Vectors in 3-D Space:
- Introduction to vectors, Scalar and vector product, Volume of parallelepiped and tetrahedron, Gradient of a Scalar Field, Divergence of a Vector Field, Curl of a Vector Field.

Integration in Vector Fields:
- Line Integral, Integration around Closed Curves. Work Done, Potential and Related Examples, Conservative and non-Conservative Fields, Green’s Theorem, Divergence Theorem, Stoke’s Theorem, Applications of Double and Triple integrals.

Power Series:
- Conformal mapping
Curriculum of Aerospace Engineering

Laplace Transformation:
- Linearity, Scaling, First shifting theorem, Heaviside’s Shifting theorem,
- Inverse Laplace transformation, Properties of inverse Laplace
- Convolution theorem, Applications in relevant engineering discipline
- Special functions (Gamma, Beta functions, Periodic functions, Error function), and Fourier Transforms.
- Fourier series, Fourier Sine and Cosine series.
- Fourier transform, Fourier cosine and sine transform, properties.
- Applications in relevant engineering discipline.

Z-Transformation:
- Z-transform, Properties of Z-transform, linearity and scaling, Standard Z-transform, Inverse Z-transform,
- Inverse Z-transform by using residue, convolution theorem of Z-transform.
- Formation of difference equation and its solution using Z-transform.

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:
Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester final exam.

Suggested Books:
- Thomas' Calculus by George B. Thomas, Jr., Maurice D. Weir, Joel R. Hass. Pearson, USA.
- George B. Thomas, Jr. and Ross L. Finney, Calculus and Analytic Geometry
- Swokowski, Onlinick & Pence: Calculus
- Robert T. Smith & Roland B. Minton: Calculus
- Calculus: Early Transcendental by James Stewart, Brooks/Cole USA.

**Applied Physics**

**Course Outline:**

**Vectors:**
Review of vectors, Ordinary Differentiation of Vector, Gradient of Scalar field, Divergence and Curl of Vector Field, Line, surface and volume integrals with their applications.

**Mechanics:**

**Electricity & Magnetism:**
Electric field due to Discrete and Continuous Charge Distributions, Electrostatic Potential of discrete and Continuous charges, Gauss’s Law and its Applications, Lorentz Force and Hall Effect, Ampere’s Law, Magnetic Field due to current element (Circular Current Loop and Solenoid)

**Waves & Oscillations:**

**Optics and Lasers:**

**Atomic and Nuclear Physics:**
Conduction of Electricity in Solids:
The electrical properties of solids, Energy level in a crystalline solid, Insulators, metals, semiconductors, doped semiconductors. The $p$-$n$ Junction, the Transistor.

Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), written assignments/quizzes, tutorials, case studies relevant to engineering disciplines, semester project, guest speaker, industrial/field visits, group discussion, report writing

Assessment:
Mid-semester exam, report writing/presentation, assignments, project report, quizzes, end-semester exam

Suggested Books:
- Hugh D. Young and R.A. Freedman, University Physics. 12th Edition

Engineering Chemistry

Area Scope:
Knowledge area of this subject collectively provides comprehensive foundation of engineering physics with emphasis on:
- Demonstrate working knowledge of applied chemistry and its application to aerospace engineering field.
- Chemical Reactions
- Galvanization
- Electrolysis
- Corrosion
Course Outline:

- Give an introduction to various types of corrosion and its prevention.
- Develop an understanding of Electrochemistry, Galvanic cell, Cell Reactions.
- Explain the concept of Reduction potentials, The Hydrogen electrode, Standard reduction potentials table, cell potentials.
- Compare electrolytic and galvanic cells, Electrolysis.
- Predict the products in an electrolysis reaction.
- Introduce batteries and the various types of batteries.
- Give examples of types of corrosion and the different types of electrochemical corrosion.
- Give an introduction to thermo-chemistry, Internal energy.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment

Mid Semester Exam/One hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester Final Exam.

Suggested Books:

- Petrucci, Herring, Madura and Bisonnette. 2017. General Chemistry: Principles and Modern Applications (11\textsuperscript{th} ed.). Pearson
Social Sciences Courses

Professional Ethics

Area Scope:

The objective of this course is to grasp ideals and principles as they have been spelled out in a variety of traditional ethical systems and to apply these conceptual structures and guidelines to major problems and dilemmas of engineering practices in a corporate culture.

Course Outlines:

- Engineering Ethics, Ethical concepts, and Types
- Moral Autonomy, Kohlberg’s & Gilligan’s Theory
- Profession and Professionalism
- Moral Reasoning, Ethical Theories
- Critique codes of ethics
- Moral frameworks, Personal commitments and professional life
- Engineering as social experimentation
- Involving the public in the design process, Case studies for engineering as social experimentation
- Assessment of safety and risk, Design considerations, uncertainty
- Risk-benefit analysis, Safe-exit and fail safe systems
- Case Studies for the Design Process Case studies in impact of safety/risk on design
- Employee/employer rights and responsibilities
- Confidentiality and conflict of interest
- Whistle-blowing, case studies on professional behavior/policies on the job
- Environment, sustainable development, Multinational corporations, globalization of engineering

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Case Studies relevant to engg disciplines, Group discussion, Report Writing.

Assessment:

OHTs, Report writing/Presentation, Assignments, Project Report, Quizzes, Final term
Suggested Books:

- Fundamentals of Engineering Economics, 3rd ed., by Chan S. Park
- The Seven Habits of Highly effective people by Stephan r. Covey
- Principle Centered Leadership Stephan r. Covey
- Change your lens change your life by (Faiez H. Seyal)
- How to Manage by Ray Wild
- Happiness by Richard Layard

Social Anthropology

Area Scope:

- Learning human nature
- Study of the processes and results of cultural contacts

Course Outlines:

- Application of anthropological skills by professional engineers and other related practitioners.
- Generating an understanding of societal growth needs within our own cultural environment.
- Develop the understanding of societal growth needs within our cultural environment; such a body of applied knowledge will result in improving professional performance of would-be engineers.
- Explain the culture and societal role which play an important part towards human activities.
- Allow students to relate technical skills to the societal needs and requirements.
- Develop the understanding of students to relate the technical skills with societal needs and requirements.
Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written assignments/ Quizzes, Tutorials, Case Studies relevant to Engg. Disciplines, Semester project, Guest speaker, Industrial/ Field visits, Group discussion, Report Writing.

Assessment:

Mid-exam, Report writing/Presentation, Assignment, Project report, Quizzes, Final exam/assessment.

Suggested Books:

- Marron, Stanley. 1057. Pakistani Society and Culture. New Heaven
Sociology for Engineers

Area Scope:

This course is meant to provide engineering students with an opportunity to view the discipline of sociology from the engineering perspective and will highlight its application to the engineering profession. This will also enable the engineers to fit their technical ideas into a socially acceptable product/project in a more successful manner. The knowledge units in this area collectively encompass the following:

- To introduce the methods and philosophy of social science to help their understanding of the socio-cultural dimension of human existence as a fundamental reality in engineering projects etc.
- To provide opportunity for students to begin the process of considering social problems/issues while designing engineering products.
- To allow engineers to play a pro-active role in critical discussions of social issues specifically.
- To demonstrate comprehension of roles and functions of various social institutions, state organizations, Professional bodies and relationships for analyzing their social impact Assessment.

Course Outlines:

Fundamental Concepts and Importance of Sociology for Engineers

Cultural Impacts of Engineering Projects on Society

Definition of Culture, Types of Culture & Elements of Culture, Culture & Power, Authority, Dominance Socialization and Personality, Role of Engineering Projects on Culture, social norms and values of Society, Cultural Infusion of Engineers in Society.
Theoretical Perspective of Sociology: Diffusion and Innovation; Adoption and Adaptation; Social development; Community Development

Community Development & Social consequences of Industrialization, Development Processes of Societal Development, Cooperation and Conflict in Community Development in Engineering Context.

Understanding of Societal & Ethical Norms and Values for Engineers

Engineering Ethics, Engineering product/services for less privileged, Role of Engg & Technology in addressing Social inequality, Core Social Values/Norms affecting Engg Performance

Organizational Social Responsibility (OSR) of Engineers

- Extent to which development intends to sensitize societal and under-privileged needs
- Gender inclusiveness and balance
- Special and Disadvantaged Community of the Area
- Planning for community inclusiveness
- Societal Obligation of Engineers

Engineers, Society and Sustainability

Social System and Concept of Sustainable Development Technology and Development, Population Dynamics in Pakistan, Causes and Consequences of Unplanned Urbanization, Community Development, Programs in Pakistan, Community Organization & Engineering Projects, Population, Technological & Industrial expansion and Development with focus on social/human/ethical dimensions.

Industrial & Organizational Psychology

Interpersonal Relations, Interpersonal Behavior, Formation of Personal Attitudes, Language and Communication, Motivations and Emotions, Impact of Technology on human feelings and level of Sensitivity

Climate Change and Ecological Friendliness from Engineering Perspective

Environment, Social Impact of Technology & Engineering Products & Services (Solid Waste Disposal, Pollution control etc).

**Social Approaches and Methodologies for Development Administration & Stakeholders Analysis**

All Phases of the Project (pre, post and execution) Structured, Focused Group, Stakeholder Consultative Dialogues etc. Dynamics of Social Change, Sociology of Change and Industrial Development, Social Change due to Technology Driven Economic Growth.

**SIA (Social Impact Assessment)**

**Engineering Intervention for Social Stratification**

Factors of Social Stratification, Engineering Interventions for addressing Social Stratification, Social Mobilization through Technological Innovation.

**Case Studies of Different Development Projects in Social Context**

**Teaching Methodology (Proposed as applicable):**

Lectures (audio,/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Project / Field Visits, Group discussion, Community Service, Report Writing, Social Impact Review and Social Audit of Engg Project

**Assessment:**

Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester Final exam.

**Suggested Books:**

Curriculum of Aerospace Engineering

Sociology

Area Scope:
The knowledge units in this area collectively encompass the following:

- To introduce the necessary subject knowledge and understanding required for the successful study of Sociology and related Social Science disciplines at undergraduate.
- To develop skills of application, analysis and evaluation in the context of the study of Social Science.
- To develop a knowledge and understanding of sociology both at a global and national level.
- To introduce the planning and organization skills necessary to develop as independent, autonomous learners.
To develop the confidence and competence of the students as learners and to assist them in taking some responsibility for their own learning through directed study and reading.

Course Outlines:

- Introduction: Sociological Perspective,
- The Development of Sociology,
- The Role of Values in Sociology, Prejudice In Early Sociology,
- Theoretical Perspective in Sociology. Culture: Components of Symbolic Culture, Subcultures and Counter Cultures, Cultural Universals, Animals and Culture,
- Technology and Global Village, Sociology and New Technology.
- Socialization: Social Development of Self, Mind, and Emotions.
- Socialization into Gender Social Structure and Interaction.
- Bureaucracy and Formal Organizations, Rationalization of Society, Formal Organizations and Bureaucracy.
- Voluntary Associations Social Classes, Economy, Politics, Power and Authority, Family, Medicine, Health and Illness, Population and Urbanization, Social Movements.
- Social Psychology with special reference to attitudes, attributions and behavior, Emotions, Cognition and Thinking, Reasoning, Problem-Solving and Creativity, Personality, Intelligence, and Abnormal Behavior, etc.
- Introduction to the Field of Organizational Behaviour.
- Conflict and Negotiation in the Workplace.
- Leadership in Organizational Settings and Organizational Culture.
- Ethics: In General an introduction and the development of ethical theory.
- Ethics in Islam, a comprehensive view with different ethics approaches and Ethics Theories.
- Research Methods for Society and Sociology.
Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/Field Visits, Group discussion, Report Writing

Assessment:

Mid Semester Exam/One hour tests, Report writing/Presentation, Assignments, Project Report, Quizzes, Semester Final Exam.

Suggested Books:

- D. Kendall, Sociology in our Times. Wadsworth Pub Co.

Social Psychology

Area Scope:

To impart knowledge of social psychology of attraction; attitudes and prejudice; altruism and aggression; personal and social identities; conformity; group influence and their applications in the real world.

Course Outlines:

- Principles of sociology and psychology with emphasis on the individual and his/her reciprocal interaction with groups
- Basic psychological factors, attribution and perception of others, attitudes and attitudinal change, social attitudes, altruism, helping others, aggression, hurting others, prejudice, disliking others, discrimination and stereotypes
- Language and communication, society and cultures, culture and personality, small groups and their relation to the individual, leadership and group dynamics. Attraction, attitudes and prejudice; altruism and aggression; personal and social identities, conformity, group influence, moral and ethical issues, harassment,
- Corruption and its control, thinking processes and decision making.
Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:
Mid semester exam/One hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester final exam.

Suggested Books:

Community Services

Area Scope:
Community service-learning provides a variety of benefits to the students and the community service has a unique way of developing an individual's leadership skills, sense of community, civic ethic, self-esteem, and other personal characteristics. Every service activity benefits a specific individual or group. Whether it is building homes for the poor, serving victims of chronic or terminal illness, tutoring children, addressing environmental needs or any other service, there is a person or group who ultimately benefits from your time. Finally, the organization where you conduct your service benefits enormously. Volunteers can make important contributions to Community benefit agencies (nonprofit) and government programs in their attempt to deal with the complex and growing needs of society.
Course Outlines:

- Develop and implement service programs
- Develop workplace communication strategies
- Analyze impacts of sociological factors on clients in community work and services
- Manage and promote diversity
- Manage legal and ethical compliance
- Facilitate workplace debriefing and support processes
- Reflect on and improve own professional practice
- Manage work health and safety
- Assess co-existing needs
- Coordinate complex case requirements
- Develop, facilitate and review all aspects of case management
- Provide case management supervision
- Undertake project work
- Lead and manage team effectiveness
- Manage personal work priorities and professional development
- Manage meetings

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:

Mid Semester Exam/One hour test, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester Final Exam.

Suggested Books:

Organizational Behavior

Course Outlines:

Introduction to Organizational Behavior

- Organizational Disciplines and topics
- Psychological Perspective
- Social-Psychological Perspectives

Structure and Control in Organization

- Introduction of Bureaucracy
- Managerial Work
- Contingency theory
- Organizational Design

Individual and Work Learning

- Learning Theories
- Learning and Work

Stress

- Types of Stress and Work
- Occupational Stress Management

Individual Differences

- Personality and its factors
- Personality dimensions and social learning Intelligence

Motivation and Job Satisfaction

- Needs at Work
- Theories of Motivation and job satisfaction
- Correlates of Job satisfaction

Group and Work

- Social Interaction
- Dramaturgy and impression Management
- Social Skill
Curriculum of Aerospace Engineering

Group and Inter group Behavior

- Group Structure & Norms
- Group Processes
- How throne Studies

Leadership

- Leadership as an attribute
- Leadership Style

Patterns of Work

- Work-the classical approach
- Marx, Weber, & The critique of labor
- Foucault & Disciplinary Power
- Conflict and Consent in Work
- The labor Process debate
- Work place control and resistance
- Industrial conflict and industrial relations

Organizational Culture

- Organizational culture and strategic management
- Exploring organizational culture
- Evaluating concept of culture

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engineering disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:

Mid semester exam/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, Semester Final Exam.
Suggested Books:

**Engineering Economics**

**Course Outlines:**

**Engineering Economics**

- Role of engineers in business
- Economic decisions v/s design decisions
- Large scale engineering projects and types of strategic economic decisions
- Fundamental principles of engineering economics

**Interest Rate and Economic Equivalence**

- Interest: The Cost of Money
- Economic Equivalence
- Development of Formulas for Equivalence Calculation
- Unconventional Equivalence Calculations

**Understanding Money and Its Management**

- Nominal and Effective Interest Rates
- Equivalence Calculations with Effective Interest Rates and with Continuous Payments
- Changing Interest Rates
- Debt Management
- Investing in Financial Assets
Curriculum of Aerospace Engineering

Present-Worth Analysis

- Project Cash Flows
- Initial Project Screening Methods: payback Screening and Discounted Cash Flow Analysis
- Variations of Present-Worth Analysis
- Comparing Mutually Exclusive Alternatives

Annual Equivalent-Worth Analysis

- Annual Equivalent-Worth Criterion
- Capital Costs versus Operating Costs
- Applying Annual-Worth Analysis
- Life-Cycle Cost Analysis
- Design Economics

Rate-of-Return Analysis

- Rate of Return and Methods of Finding It
- Internal Rate-of-Return Criterion
- Mutually Exclusive Alternatives

Cost Concepts Relevant to Decision Making

- General Cost Terms; Classifying Costs for Financial Statements
- Cost Classifications for Predicting Cost Behavior
- Future Costs for Business Decisions
- Estimating Profit from Production

Depreciation and Corporate Taxes

- Asset Depreciation: Economic versus Accounting
- Book and Tax Depreciation Methods (MACRS)
- Depletion
- Income Tax Rate to be used in Economic Analysis
- The Need for cash Flow in Engineering Economic Analysis

Developing Project Cash Flows

- Cost-Benefit Estimation for Engineering Projects
- Developing Cash Flow Statements
Project Risk and Uncertainty

- Origins of Project Risk
- Methods of Describing Project Risk: Sensitivity, Break-Even and Scenario Analysis

Special Topics in Engineering Economics

- Replacement Decisions
- Capital Budgeting Decisions
- Economic Analysis in the Service Sector

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:

Mid semester examination/one hour tests, Report writing/ Presentation, Assignments, Project Report, Quizzes, semester final exam.

Suggested Books:

- Engineering Economy by Leland T. Blank and Anthony Tarquin.
Cultural Courses
Islamic Studies and Ethics

Course Description:
The Islam is a religion of peace and harmony for all humans based on knowledge and guidance in the Holy Quran. The basic teachings of Islam are comprehensive, practicable and universal. Therefore, this course briefly presents the vision of life and applied aspects of ethical system.

Area Scope:
- To enhance understanding of Islamic Culture and Civilization
- To understand values and social system in Islam
- To improve students’ ethical and professional skill and critical thinking

Course Outlines:

Islam – Religion of Peace and Harmony
- Basic Concepts – Islam, Quran and Hadith
- Faith and Religious Life
  - Selected Verses of Surah Al-Baqara Related to Faith (Verse No-284-286)
  - Selected Verses of Surah Al-Mumanoon Related to Characteristics of Faithful (Verse No-1-11)

Islamic Culture and Civilization
- Basic Concepts and of Characteristics of Islamic Culture and Civilization
- Education System of Islam
- Political System of Islam – Dynamics, Sovereignty and Institutions
- Economic System of Islam – Principles, Riba, Trade and Commerce
- Acceptance of Other Religions – Interfaith Harmony
- Foreign Policy

Social System of Islam
- Basic Concepts of Social System in Islam
- Elements of Family and their Rights - Parents, Women, Husband & Wife, Children
- Inheritance – Rights and Laws
• Social Rights – Neighbors, Relatives and Society
• Equality and Brotherhood
  o Selected Verses of Surah al-Furqan Related to Social Ethics (Verse No.63-77)
• Concept of Welfare State – Period of Khilafat-e-Rashida

Professional Ethics and Morality

• Basic Concepts - Islam and Ethics
  o Selected Verses of Surah Al-Inam Related to Ihkam (Verse No-152-154)
• Profession and Professionalism in Islam
• Characteristics of a Professional
  o Truthfulness, Honesty, Sincerity, Patience, Gratitude, Meditation and Research
• Role for Human Safety and Environment
• Time Management
• Prophet Muhammad (PBUH) – Role Model
  o Selected Verses of Surah Al-Hujarat Related to Adab Al-Nabi (Verse No-1-18)
  o Selected Versus of Surah Al-Ihzab Related to Adab Al-Nabi (Verse No. 6, 21, 40, 56, 57, 58)

Islam and Science

• Islam and Science
• Role of Muslims in Science and Education
• Critical Thinking and Innovation
  o Selected Verses of Surah Al-Hashar (18,19,20) Related to thinking, Day of Judgment
  o Selected Verses of Surah Al-Saf Related to Tafakar, Tadabar (Verse No1,14)

Note: All topics should be taught/covered in the light of relevant Verses from Holy Quran and Ahadiths.
Teaching Methodology (Proposed as applicable):
Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:
Mid Term, Report writing/ Presentation, Assignments, Project Report, Quizzes, Final Term

Suggested Books:

- Al-Qur’an (القرآن) (selected text).
- Khurram Murad, رب کا پیغام (Lahore: Manshūrat, Mansoora, 2000)
- Hameed ullah Muhammad, “Emergence of Islam”, Islamic Research Institute (IRI), Islamabad
- Hameed ullah Muhammad, “Muslim Conduct of State” Sh Muhammad Ashraf, Kashmir Bazar, India (Latest Edition)
- Hameed ullah Muhammad, “Introduction to Islam” Compiled by The CSS Point, www.thecsspoint.com
Pakistan Studies and Global Perspective

Area Scope:
The knowledge units in this area collectively encompass the following:

- Have a better understanding of the rationale for the creation of Pakistan.
- Enable students to contribute in social, political and economic growth of Pakistan.
- Become a part of strong nation with a sense of ownership and responsibility towards Pakistan
- Play an active role toward sustainable development of Pakistan in global perspective.

Management Sciences Courses

Engineering Project Management

Area Scope:
The primary objective of this course is to get the fair understanding of core issues pertaining to Engineering Project Management. This course is aimed at providing both basic and some advanced exposure to emerging trends in the field of Project Management, so as to enable the engineering professionals of tomorrow to successfully complete sophisticated projects within the constraints of capital, time, and other resources with due regards to stakeholders set of expectations. Engineering students will learn key Project Management skills and strategies and will be able to face emerging challenges.

Core Objectives:

- To develop competencies in project costing, budgeting, and financial appraisal;
- To gain exposure to project Planning Control and Management, using standard tools and schedule variance analysis;
- To appreciate the elements of risk and quality in hi-tech projects;
- To learn Project Management by “practice”, through the medium of “End of Semester Group Project”; and
- To appreciate and understand the use of computers in Project Management, especially a tool like MS Project & Primavera etc.

Course Outline:

Project Management Concepts

Project Proposal Development

Project Proposal, Characteristics of good proposal, Types of Proposals, Request for Proposal, Request for Quotation etc.). Proposal Templates etc.
Project Feasibility

Brief review of various aspects of Project Feasibility like Technical, Social, Managerial, Economic, Financial & Marketing, Administrative etc.

Project Selection Criteria (Economic Analysis of Engineering Projects)

Using Break Even Analysis, Cost Benefit Ratio, Internal Rate of Return, Net Present Value etc.

Project Contract & Procurement Management

Engineering contracts, Type of contracts, understanding of procurement Process & Cycle, PPRA Rules

Project Planning and Scheduling

Project Planning (Resource & HR Planning), Work Breakdown Structure, Project Network & Scheduling, Manning Schedule and Activity Charts, Critical Path Method (CPM)/Project Evaluation & Review Techniques

Project Costing & Estimation

Project HRM & Communication Management

Effective organization and communication for Successful Projects, Project Organizational Structures (Project matrix and project based organizations), Project HR Plan preparation, HR Need Assessment and HR Matrix, Building and Managing effective project team, Selection & control mechanism of HRM in Projects, Effective Communication Plan.

Project Risk Management

Computer Application in Project Management

Basic/Elementary Introduction and hands on basic exposure of use of MS Project & Primavera P6 Software in Project Management
Project Quality Management

Defining Quality, Quality Assurance, Quality Management, 7 Quality Improvement Tools as applied to Project Management, Project Quality Management Plan, Quality Management Processes and Strategies

Project Closure & Termination

Project Evaluation, defining project success, Project Completion Criteria, Project Audit, Project Termination & When to close a project, the termination process, Project Close Up & lesson learnt, & Project Archive

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/Field Visits, Group discussion, Report Writing

Assessment:

Mid Term, Report writing/Presentation, Assignments, Project Report, Quizzes, Final Term

Suggested Books:

- Frame, J. D. Managing projects in organizations. San Francisco: Jossey-Bass
Entrepreneurship

Area Scope:

- Develop a business plan with an appropriate business model
- Demonstrate the ability to provide a self-analysis in the context of an entrepreneurial career
- Demonstrate the ability to find an attractive market that can be reached economically

Course Outlines:

- Basic Concept-Entrepreneurship
- Innovation and Entrepreneurship
- Basic Plan Development Cycle
- Intellectual Rights
- Financial and Legal Modalities
- Marketing
- Industrial Competiveness
Curriculum of Aerospace Engineering

- Gap Analysis, Critical Thinking and Idea Generation
- Business Plan Development
- Successful Case Studies (local)

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/Field Visits, Group discussion, Report Writing

Assessment:

Mid Term, Report writing/Presentation, Assignments, Project Report, Quizzes, Final Term

Suggested Books:

- Peter F. Drucker: Innovation and Entrepreneurship Peter F. Drucker, latest edition.
Principles of Management

Area Scope

- The focus will be on the learning fundamental principles of management and of managing people and organization.
- Develop analytical and conceptual framework of how people are managed in small, medium and large public and private national and international organizations.

Course Outlines:

- Introduction, overview and scope of discipline
- The evolution and emergence of management thought
- Management functions
- Planning concepts, objectives, strategies and policies
- Decision making
- Organizing; departmentalization, line/staff authority, commitments and group decision making
- Staffing: principles of selection, performance, career planning
- Leading: Motivation, leadership, communication
- Controlling: the system, process and techniques of controlling
- Management and Society: future perspective

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/ Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/ Field Visits, Group discussion, Report Writing

Assessment:

Mid Term, Report writing/ Presentation, Assignments, Project Report, Quizzes, Final Term

Suggested Books:

Engineering Management

Course Outlines:

- Industrial networks
- Fundamentals of Product and Process development
- Business Community and New Generations of Managers
- Practical Skills Knowledge and Experience in Commercialization of New Technological Inventions
- Use of Multidisciplinary Science Based Knowledge,
- Problem Solving, Teamwork and Outreach Activity,
- Major steps in proof of concept to intellectual property protection,
- Prototype development
- Fabrication and assembly routes
- Materials procurement,
- Identification and creation of new markets
- Development of business plan
- Appropriate technology and marketing
- Distribution and financing
- Routes and strategies for specific technology under development.

Teaching Methodology (Proposed as applicable):

Lectures (audio/video aids), Written Assignments/Quizzes, Tutorials, Case Studies relevant to engg disciplines, Semester Project, Guest Speaker, Industrial/Field Visits, Group discussion, Report Writing

Assessment:

Mid Term, Report writing/Presentation, Assignments, Project Report, Quizzes, Final Term

Suggested Books:
