

## **PERSONAL STATEMENT**

Noor Sahib Khan, son of Haji Karam Khan, born on January 1, 1967, in the resilient and culturally rich region of North Waziristan Agency. My life's journey, deeply rooted in the values of integrity, dedication, and excellence, has been marked by a relentless pursuit of knowledge and a commitment to serve my community and profession.

It was at the prestigious University Public School that I began my scholastic adventure and where I laid the groundwork for my future academic and professional pursuits. During my intermediate study at Edwards College Peshawar, I gained analytical and critical thinking abilities that have benefited me in my professional life, adding to this formative experience. The University of Engineering and Technology (UET), Peshawar, provided me with the technical know-how and creative thinking required to tackle the complexity of contemporary engineering problems, and this was the pinnacle of my academic goals—a Bachelor of Science in Civil Engineering.

I started working as a professional in 1995 when I became a Sub Divisional Officer in the C&W Department. I served in Bannu, Miranshah, Parachinar, South Waziristan, and Orakzai throughout my early career, where I refined my abilities and gained a deep comprehension of the infrastructure requirements and difficulties of our area. I continued my journey by assuming the position of Executive Engineer in Mohmand, Khyber, North Waziristan, and Kurram, which allowed me to get more leadership experience. I then worked as a superintendent engineer at Kohat, Mardan, and Peshawar as a result of my professional trajectory. Currently I have the privilege of leading South-1 wing as its chief engineer, supervising vital infrastructure projects that are essential to the growth of the area.

As evidence of my dedication to lifelong learning and career advancement, I took part in the 2008 Japan International Cooperation course on the construction and upkeep of mountain roads in South West Asia and the Indochina region. In addition, the IKRAM Training and Infrastructure Development Institute in Malaysia offered an international course in road construction and maintenance, which I finished in 2011. My worldwide perspective on engineering techniques and breakthroughs has been enhanced by these overseas encounters.

In order to stay up to date with the most recent advancements in civil engineering and infrastructure development. I have participated in a great deal of seminars and training sessions offered by different institutions around Pakistan.

Now, I am aspiring to contribute on a broader scale by contesting for a member position in the PEC Governing Body elections. My vision is to foster an environment where innovation, professionalism, and ethical practices are paramount. I am committed to advocating for policies that support continuous professional development, the integration of cutting-edge technologies, and the promotion of sustainable engineering practices.

In conclusion, I stand before you not just as a candidate but as a fellow engineer deeply committed to the progress and prosperity of our profession and our community. Together, we can build a stronger, more resilient engineering community that meets the needs of today and paves the way for a brighter, more sustainable future.
